

DOCTORAL STUDIES COURSE UNIT DESCRIPTION

Name of subject	Scientific Field	Faculty	Center/Institute/ Department
Phase Transitions in Solid State (8 ECTS credits)	Physics N 002	Faculty of Physics	Institute of applied electrodynamics and telecommunications
Student's workload	Hours	Student's workload	Hours
Lectures		Consultations	30
Individual study	170	Seminars	

Course annotation

Classification of solid state and phase transitions. Symetry of crystals, symetry elemnts, point and space groups. Classification of the crystals. Polar and non polar crystals. Liquids. Gasses Amorfic materials. Feromegmnetic, Antiferromagnetic. Solutions and alloys. Metals. Dielectric. Semiconductors. Supeconductors.Superfluidivity.Polimorfivity and politipical materials. Solid electrolites. Ferroelectrics. Liquid crystals Thermodynamic thoery of phase transitions. Ferroelectric, feroelastic. Superionic, metal – dielectric, feromagnetic phase transitions. Critical phase transition. Icommensurate phases 1st and 2nd order. Dynamical propertisd of order – disorder phase transition. Displacive type phase transition dynamical properties. Relaxational and rezonance phenomena in ferroelectrics, superionics, ferromagnetics, superconductors. Microscopic theories of phase transitions. Feroelectric phase transitions. Superionic phase transitions. Phase transitions to superconducting state. Spectroscopy of the phase transitions. Impedance, microwave, optical, ultrasound, nuclear magnetic rezonance, electron paagmenitic rezonance, Moesbauer spectroscopies.
