

DOCTORAL STUDIES COURSE UNIT DESCRIPTION

Name of subject	Scientific Field	Faculty / Center	Institute / Department
Galactic Astronomy (10 ECTS credits)	Physics N 002	Faculty of Physics	Institute of Theoretical Physics and Astronomy
		Center for Physical Sciences and Technology	Department of Fundamental Research
Student's workload	Hours	Student's workload	Hours
Lectures		Consultations	45
Individual study	200	Seminars	5

Course annotation			
Galactic stellar populations. Galactic disc, stellar associations, and open star clusters. Galactic halo and bulge. The globular cluster system. Dynamical evolution of stellar systems. Mass distribution in the Galaxy. Dark matter in the Galaxy. Theories of Galaxy formation and evolution. Chemical evolution of the Galaxy. Interstellar medium and magnetic fields of the Galaxy. Spontaneous and induced star formation. Initial mass functions of stars and star clusters.			
List of literature
