

## COURSE OF DOCTORAL STUDIES

Course title	Field of science (branch) code	University / Faculty	Institute / Department
<b>Theoretical and applied stratigraphy</b>	Natural Sciences (Geology) N 005	Vilnius University / Faculty of Chemistry and Geosciences	Institute of Geosciences /
Study methods	Number of credits allocated	Study methods	Number of credits allocated
Lectures		Seminars	
Individual work	<b>11</b>	Consultations	
<b>Course annotation</b>			
<p>The aim of the course is to acquaint doctoral students with the methodological basics of stratigraphic research. Students are introduced to the scientific principles of stratigraphy, the basics of stratigraphic classification, categories of stratigraphic units and global, regional and local stratigraphic schemes. PhD students will be able to identify and understand the nature of lithostratigraphic, biostratigraphic, sequence stratigraphic, magnetostratigraphic, chemostratigraphic, cyclostratigraphic, geochronological and other units, will be able to solve regional and global correlation issues, create local and regional stratigraphic schemes. Students will be able to read geological and make paleogeographic maps, will be able to justify the units of the general stratigraphic scale and correctly explain their relationship with local and regional units. In addition, doctoral students will be introduced to the International stratigraphy manual and the recommendations of the Stratigraphic Codes of individual states. Doctoral students will know the main stratigraphic schemes of Lithuania.</p>
